

AGCO Releases A New Solution Allowing Farmers to Create Seamless Data Connectivity

AGCO Corporation (NYSE:AGCO), a world-leading manufacturer and distributor of agricultural equipment solutions, continues to drive digital farming forward with Fuse Agro-Link™. Leveraging technology developed by AgIntegrated (AGI), a precision agriculture company with 15 years of experience, we deliver new technology that improves agronomic data flow and drive better machine utilization.

Agro-Link is a centralized data hub that allows you to transfer data seamlessly to either your mobile app or desktop. It works in tandem with TaskDoc™ Pro and VarioDoc™ Pro to transfer data from your machines with common electronic architecture (CEA). For non-CEA machines, a Sandisk iXpand flash drive connects to the terminal and iPhone to allow data transfer. This allows farmers to send their data from machines to their trusted advisors who make decisions, home office, and/or mobile app in real-time.

Customers can easily move data between cloud storage, equipment telematics systems and many farm management information systems (FMISs). Agro-Link provides a prescription file converter tool that allows you to convert whichever prescription file format you may need (shape file, ISOXML, etc.) making it easier to transfer your data and meet your needs. Your data is stored for as long as you have a subscription to Agro-Link. Agro-Link is currently live and available.

Supported equipment connections include:

- AGCO TaskDoc™Pro/VarioDoc Pro
- Ag Leader (AgFinity)
- CNH (AFS Connect & New Holland PLM Connect)
- John Deere (MJD) (John Deere Operations Center)
- Raven (SlingShot)

Supported FMIS connections include:

- Climate FieldView
- FieldReveal (SD Wheat Growers, Central Valley Ag, Landus, etc.)
- Growmark FS AIS
- F.A.R.M.
- FarmWorks (exports)
- SST (exports)
- MapShots (exports)
- Ag Leader SMS (exports)

Agro-Link is subscription based but will be available for trial at no cost in 2018. For more information and to register, visit the Agro-Link page at www.agcotechnologies.com/agro-link.
