AGCO partners with DigiFarm VBN to Expand Service Offerings

An agreement was signed at the end of 2017 for AGCO to offer DigiFarm Virtual Base Network technologies beginning in 2018. These offerings will be provided through Challenger, Fendt and Massey Ferguson dealers in North America.

"AGCO is committed to offering our customers choices that fit their operations and their needs. With the DigiFarm technology, AGCO now has the broadest offering of GNSS correction services in the industry and our dealers can offer customers a true RTK correction solution that will work with new AGCO products, legacy products and other brands of equipment," said Cody Light, strategic marketing manager, Fuse® Technology North America. "The DigiFarm agreement supports and strengthens our Fuse open approach strategy."

AGCO's partnership with DigiFarm is a product of Fuse and its open approach to precision agriculture. Fuse promises to focus on helping customers optimize their farms through seamless technology integration and connectivity.
